These "Kolo" Dusting Materials have sticking properties not found in any other dusting material. They may be applied with equal effect to either wet or dry foliage, and after once "set" will stick for weeks throughout rain and wind. This dust is a visible sticker. You can see it plainly without lens or microscope. Experiments demonstrate that this sticker dust retains a larger percentage of sulphur on the leaf surface for a longer period than is the case of "Lime Sulphur" Solution, or most any other liquid spraying material.
